

### Flowfast Quartz at RNLI, Fleetwood, Lancashire

#### The Project

A new build lifeboat station in Lancashire for the RNLI.

#### The Requirement

The project required a floor that would provide different levels of anti slip qualities for the different areas in the station. It needed to be durable and easy to maintain.

#### The Solution

Flowcrete's Flowfast Quartz was installed in the mechanics workshop, classroom, changing rooms and kitchen with a higher grade of slip resistance being used for the lifeboat house and ramp. An acrylic methacrylate system Flowfast has a curing time of less than one hour to receive full foot and vehicular traffic, has great durability and provides a functional finish for demanding environments.
